

BACHELOR ECONOMICS

IN COOPERATION WITH BOKU UNIVERSITY

Why this study program?

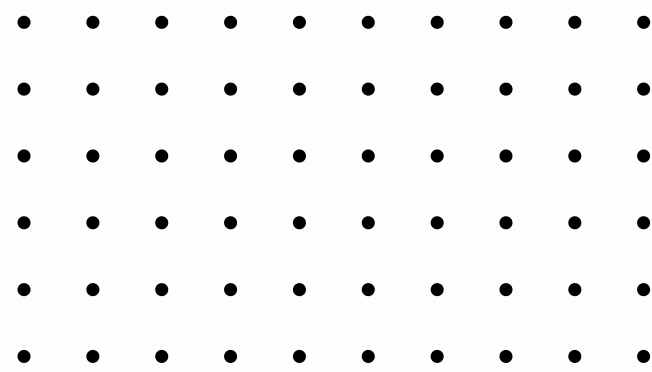

The Bachelor's Programme in Economics, developed in cooperation with **BOKU University**, is designed as an analytically oriented programme that responds to labour market needs in the economic, agricultural, and agri-food sectors, as well as in territorial development and rural communities. The programme provides an integrated theoretical and practical education with a focus on applied economics, emphasizing the understanding of economic development challenges, the design of sustainable development policies, and the analysis of agricultural markets and economic systems. With a curriculum harmonized with European standards, the programme strengthens the link between higher education and the labour market, preparing students for careers in the public and private sectors, NGOs, development agencies, and for the implementation of European policies for sustainable economic development.

Internationally recognized degree

Programme Description

The Bachelor's Programme in Economics provides integrated theoretical and practical training in economic sciences, with a special focus on agriculture, rural development, and sustainable economics. It is built on the principle of interdisciplinarity, combining economics, social sciences, technology, and natural sciences. The programme lasts three academic years (180 ECTS) and is offered by the Faculty of Economics and Agribusiness, Department of Economics and Rural Development Policies. Students are prepared for economic analysis, policymaking, and decision-making in both public and private sectors.

Graduate Profile / Professional Profile

Graduates in Economics develop analytical, interdisciplinary, and practical competencies and may work as:

- **Development economists** engaged in development analysis and policymaking
- **Economic or policy analysts** in public institutions and development agencies
- **Applied economics specialists** in the private sector, finance, or consultancy
- **Development project experts** in national and international organizations

Klaudia Vukzaj

General Directorate of Property Tax, Ministry of Finance

"I studied at the Agricultural University of Tirana and I recommend it because it offers a strong combination of theory and practice, labour-market-oriented programmes, dedicated staff, and real opportunities for professional development."

Sara Mira

Economist, AMG Ltd.

"My studies in Applied Economics at AUT provided me with in-depth knowledge of how economic systems function and strong analytical skills, which for the past three years I have applied as an economist in the private sector, developing sustainable competencies and building a successful professional profile."

Alba Tema

Project Manager, Albanian Rural Development Network

"My studies in Applied Economics equipped me with analytical skills to evaluate public policies in agriculture and rural development, linking theory with the realities of communities and supporting decision-making through evidence."

Saimir Tollia

PhD Candidate, IAMM Montpellier

"My studies in the MIDAS Master's programme and my PhD at IAMM Montpellier have provided me with advanced knowledge in agricultural economics and rural policies, enabling me to analyse the impacts of subsidy policies on farms, land, and employment, and to support decision-making with scientific evidence."

Key Competencies Acquired

Upon completion of the programme, students gain competencies in:

- Critical analysis and interpretation of major economic theories and their impact on economic development
- Evaluation of public policies using data and digital tools for informed decision-making
- Application of quantitative and qualitative methods for analysing economic phenomena at micro and macro levels
- Designing development strategies and analysing agricultural, rural, and environmental sectors

These skills are aligned with current and long-term labour market needs.
